PROMPT SELECTION MATRIX

Matriz de selección de prompts / Matriz de seleção de prompts

CONTROL THE PROJECT. TRANSFORM THE IMAGE.

Professional documentation system for controlled AI-assisted architectural visualization.

INCLUSION · Professional + Studio Pro

EN MASTER · ES/PT REFERENCE · MAXIMUM PRESERVATION COMPATIBLE WITH MODEL + INPUT

Decision rule

Regla de decisión / Regra de decisão

1. Identify the source type and one primary objective.
2. Choose CORE for speed or PRO for deeper control and documented QA.
3. Set preservation to strict, controlled or exploratory before adding style.
4. Add only one compatible extension family at a time.
5. If the source does not visibly support the operation, do not use that prompt.

INPUT	PRIMARY OBJECTIVE	PRESERVATION	START WITH	COMPATIBLE	DO NOT USE IF	PACK
3D viewport / render	Fast realism	Strict	CORE-01-11	HUM / VEH after approval	Camera or geometry is ambiguous	Starter+
3D viewport / render	Production realism	Strict	PRO-01-20	MOD-01-06; HUM; VEH	No approved source version	Professional+
Plan / section / axonometric	Technical representation	Strict	PRO-21-35	Compatible MOD only	Projection/cut logic is unclear	Professional+
Render / diagram	Artistic representation	Controlled	PRO-36-45	MOD + limited HUM	Style would hide essential geometry	Professional+
Approved base image	Human presence	Strict	HUM-01-40	One HUM scenario per pass	No visible support plane or circulation	Professional+
Approved base image	Vehicle insertion	Strict	VEH-01-15	One vehicle scenario per pass	Lane, driveway or support plane is absent	Professional+
Approved base image	Crop / lens effect	Controlled	CAM-01-10	After base approval	Required pixels or geometry are not visible	Studio Pro
Any generated result	Correction	Strict	RESCUE	LOCK brief + approved source	Global geometry/camera drift requires regeneration	Starter+

CORE or PRO?

¿CORE o PRO? / CORE ou PRO?

GATE	CORE	PRO
Use	First result and low setup	Production, repeatability and formal QA
Prompt structure	One compact operational block	Deep control block + stable PRO code
Variables	Few; change one at a time	Documented gates, settings and compatible modules
Best for	Single image or rapid validation	Series, client work and controlled iteration
Required evidence	Source + chosen objective	Source + Matrix record + project identity + audit

Extension compatibility

FAMILY	ADD AFTER	REQUIRES	FREEZE	REJECT WHEN
MOD-01-06	Compatible PRO prompt	A base objective with no contradiction	All unaffected variables	Module conflicts with base objective
HUM-01-40	Approved architecture	Visible scale, support and circulation	Architecture, camera, materials	Anatomy or route cannot be verified
VEH-01-15	Approved architecture	Legal, visible support geometry	Building, curb, lane network	Vehicle cannot fit credibly
CAM-01-10	Approved image	Sufficient source pixels	Retained crop and local geometry	Operation requires invention/outpainting

- GATE** Proceed only when the selected code has one objective, compatible extensions and visible source evidence. Otherwise choose another code or return to the source.
- INGRESO** Proceder únicamente cuando el código seleccionado tenga un único objetivo, extensiones compatibles y evidencia visible en la imagen de origen. De lo contrario, elegir otro código o volver a la imagen de origen.
- ENTRADA** Prosseguir somente quando o código selecionado tiver um único objetivo, extensões compatíveis e evidência visível na imagem de origem. Caso contrário, escolher outro código ou retornar à imagem de origem.
